PROFESSIONAL SUMMARY

Minecraft Java Developer with over five years of experience building plugins for servers supporting hundreds of concurrent players. Skilled in custom gameplay, NMS, packet-level development and multi-server systems, with a focus on performance, reliability and collaborative problem-solving.

WORK EXPERIENCE

Java Developer - Rivrs **Sep 2026 - Present**

- Maintain and extend existing Minecraft Java plugins to support evolving gameplay requirements.
- Develop plugins for multi-server environments using Redis, RabbitMQ and MySQL.
- Collaborate with fellow developers to implement features and maintain shared plugin systems.
- Built a system that automates Java-to-Bedrock resource-pack conversion.

Freelance Minecraft Plugin Developer **Jan 2021 - Present**

- Develop and maintain custom Java plugins deployed on Minecraft servers supporting hundreds of concurrent players.
- Build configurable gameplay systems using Bukkit, Spigot and Paper APIs, translating client requirements into server features.
- Work with NMS and packet-level systems to implement custom functionality beyond standard plugin APIs.
- Create custom abilities, particle effects, item mechanics and automated collection systems for servers and content creators.
- Troubleshoot bugs, resolve plugin conflicts and optimize plugin performance in live multiplayer environments.
- Adapt plugins to Minecraft updates and address version-specific API, NMS and packet compatibility issues.
- Collaborate with clients and development teams throughout implementation and delivery, providing ongoing support and feature updates.
- Develop and maintain Minecraft plugins, including NextGens, NextCollectors, NextCoinflip, ItemSkins. Explore the full portfolio at blocksmith.studio.
